

## **International Workshop Series “Severo Ochoa”**

IMDEA Nanociencia hosts the 1st International Workshop -part of their Severo Ochoa programme “Computational and Theoretical Nanoscience”

The first workshop of the series -focused on computational and theoretical nanoscience, takes place on the 30<sup>th</sup> Nov. and 1<sup>st</sup> Dec. The scientific committee in this first edition is formed by Prof. F. Guinea, Prof. F. Martín and Prof. R. Miranda.

The International Workshop Series, a set of workshops that will be held at IMDEA Nanociencia in Madrid every 3-6 months with a duration of 1-2 days. The workshop is conceived within the framework of the Severo Ochoa Centre of Excellence programme. Each will be focused in a certain field related to Nanoscience & Nanotechnology and world leading experts will be invited to give a seminar and participate in round table discussions.

The aim of the workshop series is to provide an insight into the latest investigations, foster/strengthen research collaborations in the field, and to exchange knowledge in an active manner. The workshop also brings the opportunity, to both experienced and early-stage researchers, to listen to high-level advances in a specific topic. The scientific committee of each series will be comprised by IMDEA Nano researchers with interest and experience in the specific topic selected.
